

EGR-Matzgenerator 1.7 – New Features

1 Conversion to sRGB

One requirement for OFML data is that the textures must be in RGB color space and sRGB color profile.

The latest EGR-Matzgenerator automatically detects images that are not in this format and converts them. For better traceability, it outputs which images have been adjusted and in what form.

2 Velvet materials

A suitable value for the Sheen color is set automatically. If there is a sheen value in the template or input material, the sheen_color is set 10% lighter than the average color of the input texture.
