

Web Configuration Framework 9.0 - New Features

Content

1	Requirements and SOAP Support	1
2	Available on NPM.....	1
3	New OFML Aided Planning (OAP) Features	1
4	End of Support: iOS 12	1
5	Further Changes.....	2

1 Requirements and SOAP Support

W-CF 9.0 requires EAIWS 4.14 or higher and therefore supports the EAIWS 4.14 SOAP API.

2 Available on NPM

The Web Configuration Framework is now available on NPM under the name `@easterngraphics/wcf`:

<https://www.npmjs.com/package/@easterngraphics/wcf>

Note: That required a change in the package name from `@egr/wcf` to `@easterngraphics/wcf` therefore all module imports have to be changed.

3 New OFML Aided Planning (OAP) Features

Support of the new OAP interactor symbols: Electrification, Lighting, RotateNY und RotatePY

4 End of Support: iOS 12

iOS 12 or older is no longer supported.

The deprecated GLTF scene export was removed (`mdl/io/GltfScene`). Please use the GLTF export provided by EAIWS instead (see `getExportedGeometry` in EAIWS SOAP specification).

5 Further Changes

- added `modules/polyfill/core-js` which can be imported as a module to bundle the core-js polyfill
- added `prop/groupProperties()` utility to simplify and unify the property grouping in applications
- choice property values may now be marked as not selectable, see `prop/PropertyValue.selectable`
- added `view/Viewer.handleWheelEvent` property which can be used to disable wheel event handling and allow page scrolling
- spaces and colons at the end of the property text will be removed (can be disabled using `wcfConfig.articleConfigurationOptions.trimPropText`)
- removed obsolete function `Basket.InitSessionGeneratedImageOptions()` (defaults are now defined in EAIWS server.cfg)
- replaced `ArticleElement.getCatalogImage()` by `ArticleElement.getCatalogImageUrl()`
- removed `wcfConfig.libsPath` and `getLibsPath()`
- replaced `Log.eventWarn` and `eventError` by callbacks `onWarn` and `onError` to prevent circular dependency errors
