## 1 General Notes

### 1.1 Database update – Workspace compatibility

The pCon.creator 2.19 performs a database upgrade. When opening a workspace from an older pCon.creator version, the databases for the OCD, ODB, OAS, ORG and CLS module are automatically updated.

### 1.2 Simplification licensing X3G-CadSystemAdapter

The activation of the X3G-CadSystemAdapter plugin has been simplified. Regarding the previous separate activation of the plugin via additional SafeNet licenses in pCon.planner no extra steps have to be taken in the future.

### 1.3 Announcement: End of support Microsoft Office 2013 Professional (32 bit) with pCon.creator 2.20

Starting with pCon.creator 2.20 (Release Q1/2024) Microsoft Office 2013 Professional (32 bit) is no longer supported.

## 2 Graphic data development

### 2.1 Announcement: Importing of components only possible with pCon.planner starting with pCon.creator 2.20

Starting with version 2.20 of pCon.creator (release Q1/2024), components can only be imported with pCon.planner.

### 2.2 Selection of accuracy when importing and exporting geometries

In the product line setting of an ODB series, the accuracy of the transferred values from the CAD systems can now be set.

### 2.3 End support for old Autodesk® AutoCAD® versions

Autodesk® AutoCAD® versions 2010 to 2018 will no longer be officially supported as of pCon.creator 2.19.

## 3 Commercial data development

### 3.1 Support for classification systems

With pCon.creator 2.19 the classification systems ECLASS and UNSPSC are supported.
