

# pCon.creator 2.20.1 System Requirements

## Minimum requirements

Processor	x86 or x86-64 Pentium IV (class 2 GHz) or equivalent AMD processor
System Memory	2 GB
Operating System	Microsoft Windows 10
Disc Space	1 GB
Graphics Board	For graphical data creation, the graphic board requirements of the used CAD-System and pCon.planner should be taken into account.
Display Resolution	1024 x 768 pixels
Microsoft Office	Microsoft Office 2016 Professional 32bit
CAD-System	pCon.planner 8.8
USB-Port	Only needed if pCon.login is not used as a licensing method. When using a 64 bit version of Microsoft Office, no USB port is required.

## Internet connection

Licensing with pCon.login requires an Internet connection. As a rule, pCon.login works without restrictions in conjunction with security software. With very restrictive security software, access to \*.pcon-solutions.com and \*.easterngraphics.com must be ensured via HTTP/HTTPS (ports 80, 443). It must be assumed that pCon.creator communicates with \*.pcon-solutions.com at all times during runtime.

## Optional Features with access to the internet

If the update check is activated, access to <https://downloads.pcon-solutions.com/pCon/creator/release/latest/PCR2-UpdateNotification.xml> is necessary.

## Note

The above system requirements are only an example of a minimally supported system environment. In general, the following versions of the required components are supported.

It should be noted that these components have their own individual requirements.

## Supported Operating Systems

Microsoft Windows 10

Microsoft Windows 11

## Supported Microsoft Office Versions<sup>1,2</sup>

---

Microsoft Office 2021 Professional (Access) 64bit

---

Microsoft Office 2021 Professional (Access) 32bit

---

Microsoft Office 2019 Professional (Access) 64bit

---

Microsoft Office 2019 Professional (Access) 32bit

---

Microsoft Office 2016 Professional (Access) 32bit

---

## Notes

The above-mentioned versions of the desktop applications from the Microsoft Office 365 subscription are supported<sup>3</sup>.

It has to be considered that different components from different Microsoft Office versions should not be installed in parallel<sup>4</sup>.

## Supported CAD-Systems

---

pCon.planner 8.9

---

pCon.planner 8.8

---

---

<sup>1</sup> The Microsoft Access Runtime version is not supported.

<sup>2</sup> Using several functions of pCon.creator, the installation of Microsoft Excel is required, too. Microsoft Excel and Access from the same Office Suite Version should be installed.

<sup>3</sup> Using pCon.creator, a locally installed Microsoft Office Access Desktop version is necessary. For this reasons, Office 365 subscription plans, which include only web or mobile Office Apps, are not supported.

<sup>4</sup> Internal problems or conflicts of internal parts of office components can occur when installing different Microsoft Office components in parallel. A result of such Office internal problems may be that pCon.creator does not start. Especially installing Office from an Office 365 subscription already installed Office versions e.g. pre-installed test versions should be removed first.
