

pCon.creator 2.21.1 System Requirements

Minimum requirements

Processor	x86 or x86-64 Pentium IV (class 2 GHz) or equivalent AMD processor
System Memory	2 GB
Operating System	Microsoft Windows 10
Disc Space	1 GB
Graphics Board	For graphical data creation, the graphic board requirements of the used CAD-System and pCon.planner should be taken into account.
Display Resolution	1024 x 768 pixels
Microsoft Office	Microsoft Office 2016 Professional 32bit
CAD-System	pCon.planner 8.10
USB-Port	Only needed if pCon.login is not used as a licensing method. When using a 64 bit version of Microsoft Office, no USB port is required.

Internet connection

Licensing with pCon.login requires an Internet connection. As a rule, pCon.login works without restrictions in conjunction with security software. With very restrictive security software, access to *.pcon-solutions.com and *.easterngraphics.com must be ensured via HTTP/HTTPS (ports 80, 443). It must be assumed that pCon.creator communicates with *.pcon-solutions.com at all times during runtime.

Optional Features with access to the internet

If the update check is activated, access to <https://downloads.pcon-solutions.com/pCon/creator/release/latest/PCR2-UpdateNotification.xml> is necessary.

Note

The above system requirements are only an example of a minimally supported system environment. In general, the following versions of the required components are supported.

It should be noted that these components have their own individual requirements.

Supported Operating Systems

Microsoft Windows 10	As of pCon.creator 2.22 (Q1/2026) discontinued
Microsoft Windows 11	

Supported Microsoft Office Versions^{1,2}

Microsoft Office 2024 Professional (Access) 64bit	
Microsoft Office 2024 Professional (Access) 32bit	
Microsoft Office 2021 Professional (Access) 64bit	
Microsoft Office 2021 Professional (Access) 32bit	
Microsoft Office 2019 Professional (Access) 64bit	As of pCon.creator 2.22 (Q1/2026) discontinued
Microsoft Office 2019 Professional (Access) 32bit	As of pCon.creator 2.22 (Q1/2026) discontinued
Microsoft Office 2016 Professional (Access) 32bit	As of pCon.creator 2.22 (Q1/2026) discontinued

Notes

The above-mentioned versions of the desktop applications from the Microsoft Office 365 subscription are supported³.

It has to be considered that different components from different Microsoft Office versions should not be installed in parallel⁴.

Supported CAD-Systems

pCon.planner PRO 8.12
pCon.planner PRO 8.11
pCon.planner PRO 8.10

¹ The Microsoft Access Runtime version is not supported.

² Using several functions of pCon.creator, the installation of Microsoft Excel is required, too. Microsoft Excel and Access from the same Office Suite Version should be installed.

³ Using pCon.creator, a locally installed Microsoft Office Access Desktop version is necessary. For this reasons, Office 365 subscription plans, which include only web or mobile Office Apps, are not supported.

⁴ Internal problems or conflicts of internal parts of office components can occur when installing different Microsoft Office components in parallel. A result of such Office internal problems may be that pCon.creator does not start. Especially installing Office from an Office 365 subscription already installed Office versions e.g. pre-installed test versions should be removed first.
