pCon.creator 2.22.2 System Requirements

Minimum requirements	
Processor	Intel or equivalent AMD processor with 2 Ghz or faster x86 x64 architecture
System Memory	4 GB
Operating System	Microsoft Windows 11
Disc Space	1 GB
Graphics Board	For graphical data creation, the graphic board requirements of the used CAD-System and pCon.planner should be taken into account.
Display Resolution	1920 x 1080 pixels
Microsoft Office	Microsoft Office 2021 Professional
Microsoft .NET Framework	4.8 or newer[1]
CAD-System	pCon.planner 8.12
USB-Port	Only needed if pCon.login is not used as a licensing method. When using a 64 bit version of Microsoft Office, no USB port is required.

Internet connection

Licensing with pCon.login requires an Internet connection. As a rule, pCon.login works without restrictions in conjunction with security software. With very restrictive security software, access to *.pcon-solutions.com and *.easterngraphics.com must be ensured via HTTP/HTTPS (ports 80, 443). It must be assumed that pCon.creator communicates with *.pcon-solutions.com at all times during runtime.

Optional Features with access to the internet

If update check is enabled, access to pcon-solutions.com is required.

Note

The above system requirements are only an example of a minimally supported system environment. In general, the following versions of the required components are supported.

It should be noted that these components have their own individual requirements.

[1] Usually, Microsoft .NET Framework 4.8.1 is already installed on Microsoft Windows 11.

Supported Operating Systems

Microsoft Windows 11

Supported Microsoft Office Versions[2,3]

Microsoft Office 2024 Professional (Access) 64bit

Microsoft Office 2024 Professional (Access) 32bit

Microsoft Office 2021 Professional (Access) 64bit

Microsoft Office 2021 Professional (Access) 32bit

Notes

The above-mentioned versions of the desktop applications from the Microsoft Office 365 subscription are supported[4].

It has to be considered that different components from different Microsoft Office versions should not be installed in parallel[5].

Supported CAD-Systems

pCon.planner PRO 8.13

pCon.planner PRO 8.12

[2] The Microsoft Access Runtime version is not supported.

[3] Using several functions of pCon.creator, the installation of Microsoft Excel is required, too. Microsoft Excel and Access from the same Office Suite Version should be installed.

[4] Using pCon.creator, a locally installed Microsoft Office Access Desktop version is necessary. For this reasons, Office 365 subscription plans, which include only web or mobile Office Apps, are not supported.

[5] Internal problems or conflicts of internal parts of office components can occur when installing different Microsoft Office components in parallel. A result of such Office internal problems may be that pCon.creator does not start. Especially installing Office from an Office 365 subscription already installed Office versions e.g. pre-installed test versions should be removed first.
