1 Detailed Improvements for Perfect Performance

pCon.planner 8.11 focusses on reliability and quality. For the new version, we concentrated on improving the performance of existing features. Despite this focus, the update includes some enhancements that are directly effective with regard to your workflow.

2 General Enhancements

The new version of pCon.planner comes with background adjustments and corrections to ensure you continue to experience the usual high quality in every planning. These include:

- Integrated Browser: Improved user authentication for proxy servers
- Plugin SDK extended for better export control and improved OFML article handling
- *Room Stamp* tool now creates a text field accessible via the *Properties Editor* – easier editing, especially with multi-selection
- *Render Styles* dialog: Sample styles are now accessible via an integrated gallery
- *Layout*: print and PDF export improved
- Line styles are kept when the *Stretch* tool is used
- Improved Excel/CSV export for special items (article groups)

3 Improved OFML Functionality

pCon.planner 8.11 supports the new OAP (OFML Application Protocol) version 1.6 for a better processing and more concise display of your OFML data. In addition, the new pCon.planner does also support DSR 3.7.

4 Image Handling

Images file for material textures and images are cleaned up during import, enforcing the creation of OMATZ compliant images. This improvement prevents issues in the project exchange with other pCon applications and supports the robust creation of exports.

The improved image handling includes the conversion of non-regular images like JPEG images using CMYK colors or images with embedded color profiles into regular encoded images.

Please note: The original images are not preserved in such cases.

5 Breaking Changes

Please note that pCon.planner 8.11 is the final product version supporting the old CSV export via the *Article List* window. Please switch to the new CSV export provided via *File > Export > Articles*.
