

Catalog Image Generator History

Catalog Image Generator 1.5

Catalog Image Generator 1.5 (2023-12-11)

- Now it is possible to set configuration profiles and to export images for all possible configurations.
- The option Move and Center was removed. Now the articles can be placed in the planning and the camera set to the article. All images will be rendered using the camera position.
- Already rendered images are recorded in log and now it is possible to skip them next time when the process starts
- There is the possibility to define the position where the article is positioned in the planning related to camera (left, middle, right)
- In the settings dialog it is possible to define which layers must be hidden before image export.

Catalog Image Generator 1.4.1

Catalog Image Generator 1.4.1 (2022-12-15)

- Fixed a bug which appear when the user select to load an OBX file

Catalog Image Generator 1.4 (2022-11-17)

- A new default profile was added: Photorealistic - Variable aspect ratio
- Creation of Images for PEC files from catalog possible
- Fixed some Issues regarding the angle of the custom cameras
- Position of windows can be reset using CTRL key
- The preview will show the rendered Image progress during Photorealistic rendering and the process can also be canceled
